Status update on flow models for gauge field generation

Monday, August 8, 2022 4:30 PM (20 minutes)

I will describe recent progress in the development of custom machine learning architectures based on flow models for the efficient sampling of gauge field configurations. I will present updates on the status of this program and outline the challenges and potential of the approach.

Primary authors: SHANAHAN, Phiala (MIT); ABBOTT, Ryan (MIT); ALBERGO, Michael (New York University); BOYDA, Denis (Argonne); CRANMER, Kyle; HACKETT, Dan; KANWAR, Gurtej (University of Bern); RACANIERE, Sebastian (Deep Mind); REZENDE, Danilo (Deep Mind); ROMERO-LOPEZ, Fernando (MIT); URBAN, Julian (ITP Heidelberg)

Presenter: SHANAHAN, Phiala (MIT)

Session Classification: Algorithms

Track Classification: Algorithms (including Machine Learning, Quantum Computing, Tensor Networks)
