B-meson semileptonic decays with highly improved staggered quarks

Wednesday, August 10, 2022 4:30 PM (20 minutes)

In this talk we present results on B-meson semileptonic decays using the highly improved staggered quark (HISQ) action for both valence and 2+1+1 sea quarks. The use of the highly improved action, combined with the MILC collaboration's gauge ensembles with lattice spacings down to ~ 0.03 fm, allows the b quark to be treated with the same discretization as the lighter quarks. The talk will focus on updated results for $B_{(s)} \rightarrow D_{(s)}$, $B_{(s)} \rightarrow K$, and $B \rightarrow \pi$ scalar and vector form factors.
