Why CRC110 ?

Structures of QCD : forefront of exploring microscopic structure of matter

Hadron structure : forefront of both particle and nuclear physics

Why CRC110 ?

Large Chinese investment (1 Billion RMB) in QCD relevant facilities

and international experiment collaborations

PANDA/FAIR (IHEP&IMP)

STAR/RHIC (SINAP&HNU&USTC)

Experiments need theoretical guidance and support

Shortage of relevant experienced theorists in China

2006	CERN	KEK	BNL	IHEP	IMP
Theorists with Ph.D	133	56	59	17	4

2007 CAS → TPCSF

- 1) fix-term Research Associates (4-6), postdocs (8-12)
(France, Italy, USA, Japan, India, Hungary, China)
- 2) visitors (4-6 person x year)
- 3) workshops and summer school

Still short of high level visiting collaborators
like German PIs and reviewers of the CRC110

TABLE III. The predicted binding energies ΔE and masses M for the $[\Xi'_c \bar{D}^{(*)}]_J$, $[\Xi_c^* \bar{D}^{(*)}]_J$, and $[\Xi_c \bar{D}^{(*)}]_J$ systems in $J=0$ channel, where the subscript “ J ” denotes the total spin of the system. We correspondingly use the thresholds of $\Xi_c' + \bar{D}^{(*)0}$, $\Xi_c^* + \bar{D}^{(*)0}$, and $\Xi_c + \bar{D}^{(*)0}$ as the benchmarks to calculate the values in this table (in units of MeV). The state that denoted by “#” means which may be nonexistent at the upper limit.

Totally there are 100+ Sino-German joint papers

Perspectives

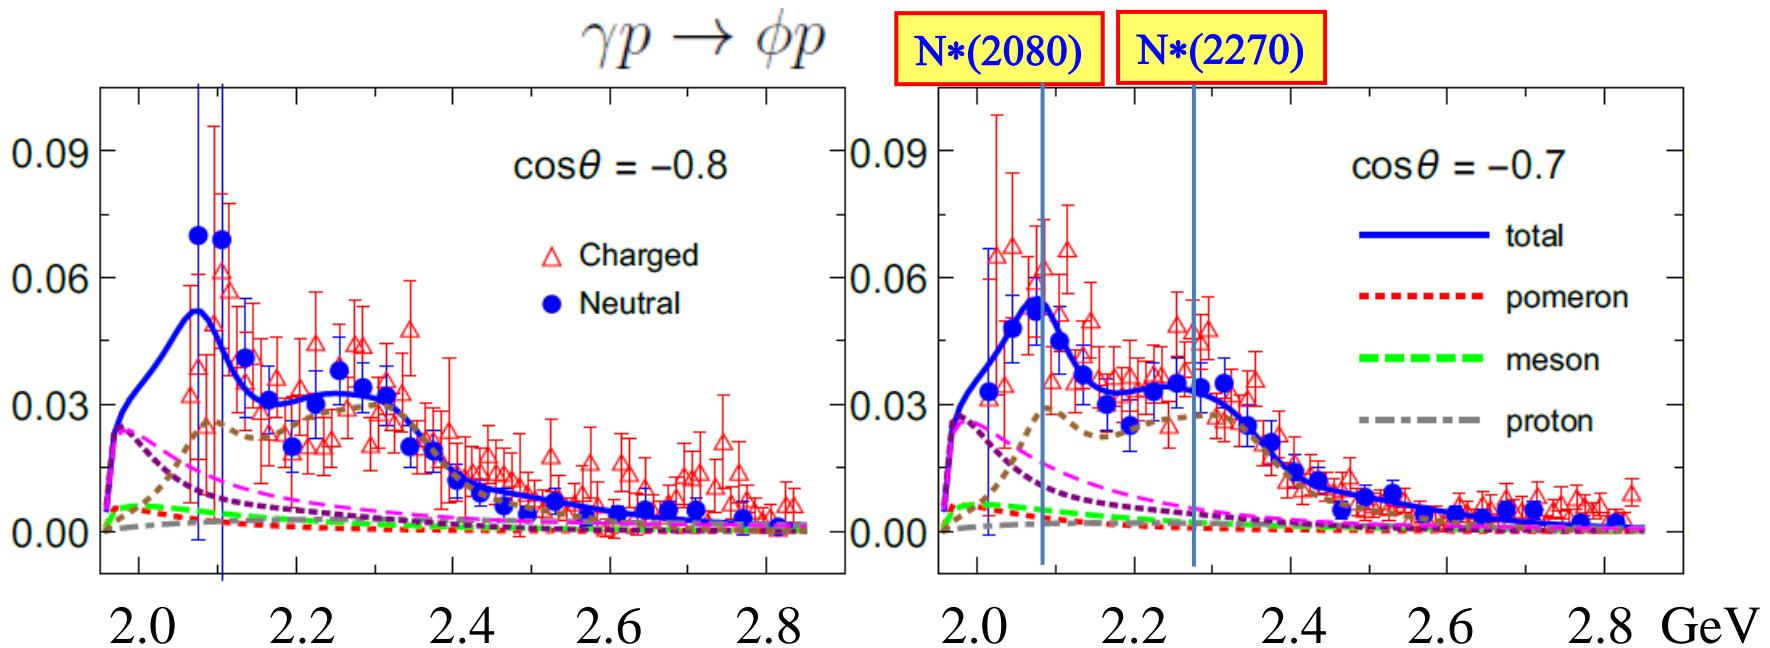

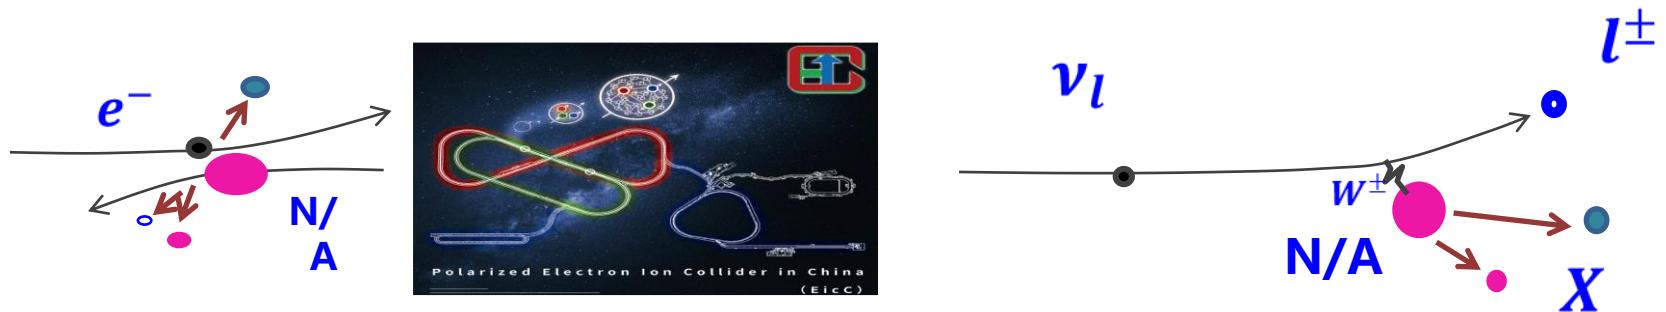

- last 12 years' CRC110 is very successful
- our knowledge on hadron structure is much improved

- nuclear lattice EFT is well developed for nuclear clusters
- hadron and nuclear structures with mixture of various cluster configurations to be further explored by joint efforts from EFT, models, lattice & expts

Perspectives

- Promising relevant facilities: **CEBAF12, ELSA, Belle2, BEPC2', EicC, EIC, Faser...**

CLAS, PRC89(2014)019901, S.M.Wu, F.Wang, B.S.Zou, PRC108(2023)045201

Perspectives

- Many new platforms led by our CRC PLs are ready for our further collaboration

Shan-Gui Zhou, Feng-Kun Guo: ITP@CAS, Peng-Center@ITP

Qiang Zhao, Cai-Dian Lü : IHEP theory division

Shi-Lin Zhu: ITP@PKU; Chuan Liu & Xu Feng: NSFC major project on LQCD

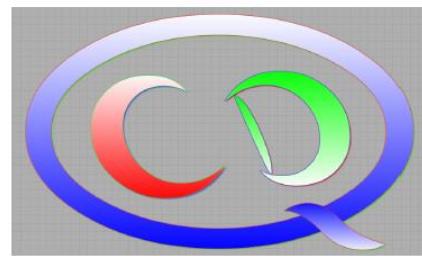

Jie Meng: NPT-Center @ CIAE

Bing-Song Zou : SCNT@HIAF, HEP-Center@Tsinghua-U

- All our CRC German PLs are warmly welcome to visit these institutions !

Conclusion

The successful CRC110 comes to an end,
our friendship & collaboration should be continued!

Thank you for your attention !

Thank you all for making this a success !

LHCb spokesperson Passaleva: “A group of Chinese theorists provided fundamental inputs to drive the analysis to the right direction and gave key suggestions to achieve this result.”

Heavy meson production and decay from QCD EFT

- First time computing NNLO radiative correction of hadronic widths of η_c , η_b

Feng, Jia, Sang, PRL119 (2017) 252001

From NLO to NNLO, it takes about 40 years

- Propose a factorization theorem connecting B meson light-cone distribution amplitude, defined in QCD and HQET, respectively

Ishaq, Jia, Xiong, Yang, PRL125 (2020)

$$\Phi^{\text{QCD}}(x, \mu_Q) = \int_0^\infty d\omega Z(x, \omega, m_b; \mu_Q, \mu_H) \Phi_+^{\text{HQET}}(\omega, \mu_H),$$

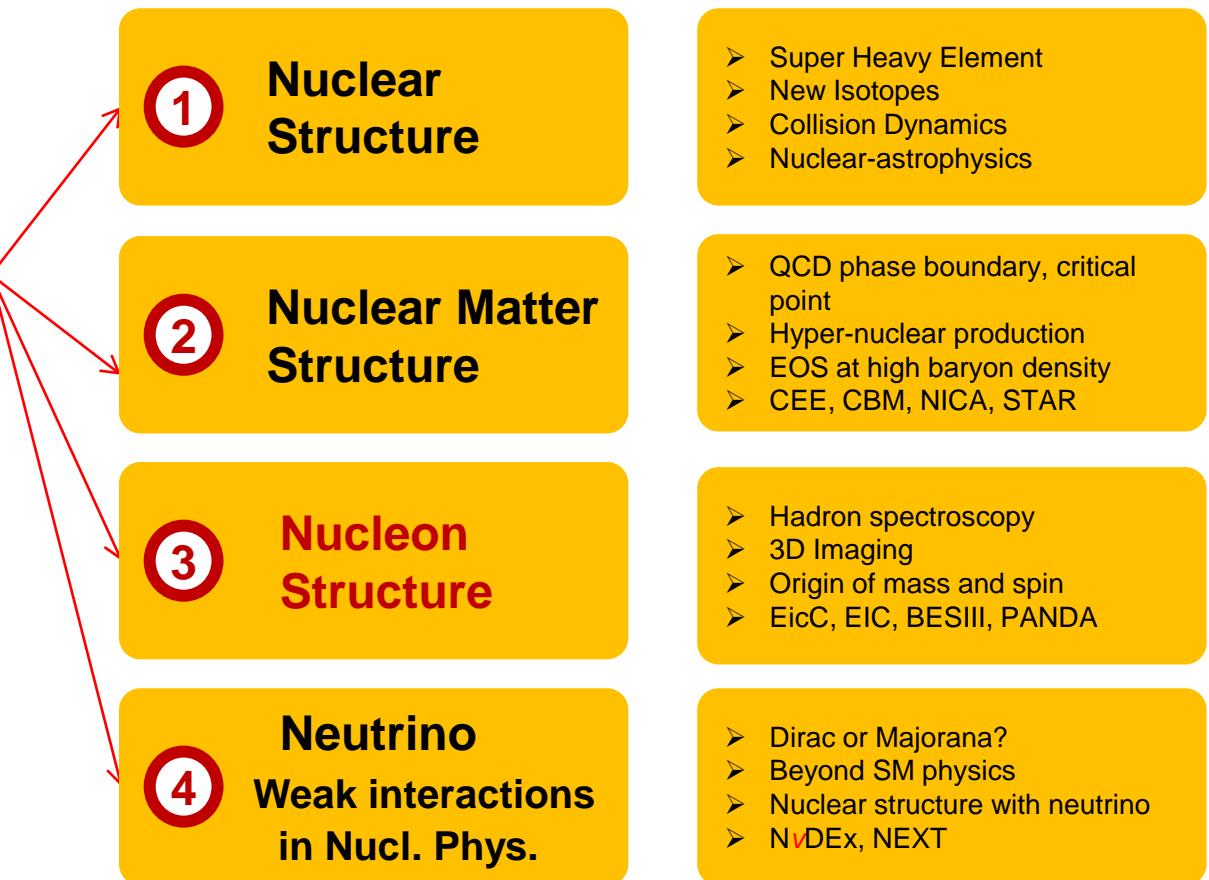

Z factor can be computed in perturbation theory. This factorization theorem allows one to efficiently investigate heavy meson exclusive production.
